Problem and Definition of Requirement

- In betting games, the dependency on the center reduces the trust in the system.
- Betting Sites / Organizations work like a workplace. Like other businesses, they have a business model designed to guarantee their own profits.
"House Always Wins"
- Even though people think they've won, it's always the house that wins.
- People have no impact on their bettings in order to win.
- That's why we offer users the opportunity to participate in bets with their own NFT assets, so that people can also have an impact on the game. We do this by preserving the chance factor in the bets.

Proposed Model

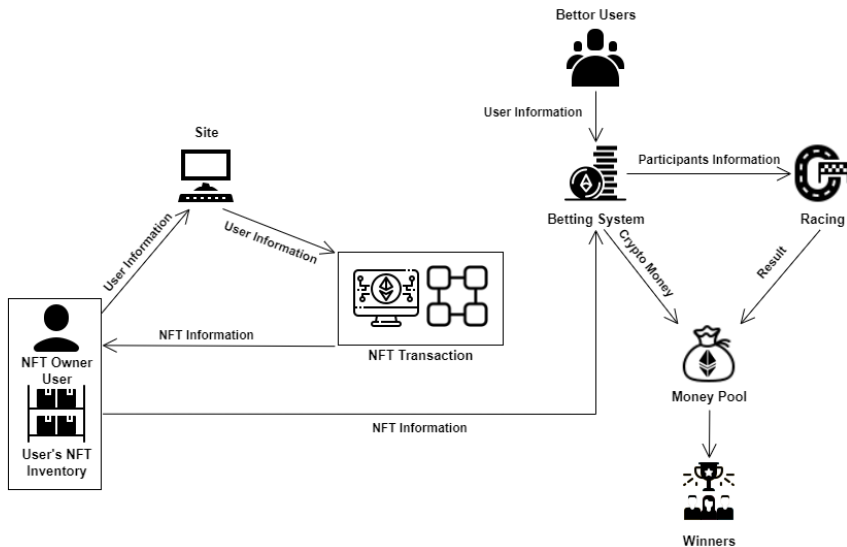

Figure: System Model

- What distinguishes it from betting games is that we have our own assets and can participate in bets with them.
- We can upgrade our NFT assets under certain conditions.
- In this way, we give players different options to win by offering strategic variations on the betting game side.

- We aim to change people's attitudes and perspectives towards betting games.
- Seeing the needs arising from people's search for safer platforms to bet, we encourage companies in this industry to make the necessary moves.

Team Members and Roles

- Hakan Karaotcu: Front-end&Back-end developing, Solidity Developing, Gameplay Mechanics
- Mustafa Battaloğlu: Front-end&Back-end developing, Solidity Developing, Betting Maths&Logic

Work Packages

İŞ-ZAMAN ÇİZELGESİ (*)

İ P N o	İş Paketlerinin Adı ve Hedefleri	Kim(ler) Tarafından Gerçekleştiril eceği	Zaman Aralığı (... Hafta)	Başarı Ölçütü ve Projenin Başarısına Katkısı
1	Finding the necessary assets for the site	Hakan Karaotcu	1-2	Required for the interface sketch of the game Contribution to the success of the project: 10%
